                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 84<br>71<br>78<br>48<br>45<br>50<br>69<br>53<br>54<br>51<br>80<br>80<br>75<br>76<br>78                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76<br>82<br>45<br>49<br>62<br>70<br>60<br>56<br>63<br>83<br>84<br>80<br>54<br>75<br>88                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 84<br>71<br>78<br>48<br>45<br>50<br>69<br>53<br>54<br>51<br>80<br>75<br>76<br>78                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76<br>82<br>45<br>49<br>62<br>70<br>60<br>56<br>63<br>83<br>84<br>80<br>54<br>75                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 84<br>71<br>78<br>48<br>45<br>50<br>69<br>53<br>54<br>51<br>80<br>80<br>75<br>76                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76<br>82<br>45<br>49<br>62<br>70<br>60<br>56<br>63<br>83<br>84<br>80<br>54                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76<br>82<br>45<br>49<br>62<br>70<br>60<br>56<br>63<br>83  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76<br>82<br>45<br>49<br>62<br>70<br>60<br>56  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                  | 83<br>65<br>71<br>49                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                  | 83<br>65                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>76                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                  | 80                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ٠-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 84<br>81                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 86<br>84 

  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 93<br>55 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 78<br>81                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 81<br>83                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 82<br>89                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 73<br>77                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 72<br>87 NOTES ON RAINFALL

486. KEW OBSERVATORY

Dry Periods.

1935

The following definitions are adopted by "The British Rainfall Organisation".

An "absolute drought" is a period of at least 15 consecutive days to none of which is credited 0.2 mm of rain or more.

A "partial drought" is a period of at least 29 consecutive days, the mean daily rainfall of which does not exceed 0.2 mm.

A "dry spell" is a period of at least 15 consecutive days to none of which is credited 1.0 mm or more.

"Absolute drought" July 21st - August 11th
"Partial drought" July 20th - August 22nd "Dry Spell" March 4th - 22nd

Wet Periods.

The following definitions are adopted by "The British Rainfall Organisation".

A "Rain Spell" is a period of at least 15 consecutive days to each of which is credited 0.2 mm of rain or more.

A "Wet Spell" is a period of at least 15 consecutive days to each of which is credited 1.0 mm or more.

No "Rain Spells" or "Wet Spells" occurred in 1935

Rainfall Duration.

0-1-1-0 1-1-2-0 2.1-6.0 6-1-12 Hours Number of days

Continuous Falls.

The fall of the longest duration was 25 mm in 9h 30mm on Nov.7th.

Heavy Falls in Short Periods.

On July 2nd. 5mm fell in 4 minutes and 10 mm in 13 minutes

Rate of Rainfall (Jardi Recorder).

The highest instantaneous rate of rainfall recorded by this instrument was 129 mm/hr on June 16th.

RAINFALL

Amounts in millimetres, for periods of sixty minutes between the exact hours, Greenwich Mean Time.

487. KEW OBSERVATORY: H_r (height of receiving surface above M.S.L.) = H (height of station above M.S.L.) + h_r (height of receiving surface above ground) = 5.5 metres + 0.53 metres

⁺ Hour of occurrence of the meximum rate of fall ( 5 mm/hr or more. )

RAINFALL

Amounts in millimetres, for periods of sixty minutes between the exact hours, Greenwich Mean Time.

495. KEW OBSERVATORY: Hr (height of receiving surface above M.S.L.) = H (height of station above M.S.L.) + hr (height of receiving surface above ground) = 5.5 metres + 0.53 metres

WIND: DIRECTION AND SPEED Averages for periods of sixty minutes, ending at the exact hours, Greenwich Mean Time

M. S. L. +  $h_a$  (height of anemometer above ground) = 5 metres + 23 metres

JANUARY, 1935

Note. - The Potential Gradient is reckoned as positive if the potential increases upwards. For indeterminate potential gradient the following notation is used:- Z+, Indeterminate, positive value; Z-, Indeterminate, negative value; Zt, Indeterminate in magnitude and sign.

(a) Mean from all positive readings.

(b) Mean from all complete days, using both positive and negative readings.

POTENTIAL GRADIENT (reduced to level surface, Paddock Site): VOLTS PER METRE KELVIN ELECTROGRAPH STANDARDIZED BY WILSON READINGS, UNDERGROUND LABORATORY Mean values for periods of sixty minutes, between the exact hours, Greenwich Mean Time

1935

Note.-The Potential Gradient is reckoned as positive if the potential increases upwards. For indeterminate potential gradient the following notation is used. Z+, Indeterminate, positive value; Indeterminate, negative value; Z±, Indeterminate in magnitude and sign.

(a) Mean from all positive readings.

(b) Mean from all complete days, using both positive and negative readings.

#### INTRODUCTION.

## Notes on the tables of Upper Air Temperatures obtained from soundings with registering balloons at Kew Observatory and Sealand, 1935.

The tables in the Aerological Section are presented in the same form as those appearing in the Observatories' Year Book since 1930. As in that volume geopotential is used in place of geometric height for the vertical coordinate. The units employed are:

I Leo (symbol l.).=10⁵ c.g.s. units of geopotential.

I Kiloleo (symbol Kl.).=108 c.g.s. ,, ,, ,, ,, ,, A table shewing the relation between height and geopotential in latitude 52° 20′, the approximate mean latitude of Kew Observatory and Sealand, is given in the Introduction to the Aerological Section of the Observatories' Year Book, 1930. For ordinary purposes it may be taken that if 2·1% be added to the geopotential in kiloleos the corresponding height in kilometres will then be obtained.

The Dines pattern meteorograph was employed solely as before, and the method of operation remained the same as in recent years. A full description will be found in "The Dines Balloon Meteorograph and the method of using it."* In the computation of pressure-geopotentials the graphical method was employed, checked as to its main features by an arithmetical process. The effect of humidity on the density of the air was neglected.

A total of 80 soundings were made during the year, 67 from the Aviation Service Station of the Meteorological Office at Sealand Aerodrome and 13 from Kew Observatory. The choice of station from which a sounding was made was generally determined in view of the probable direction and length of the run of the balloon. In the cases of 64 of these soundings the instrument was found and returned, the rest being lost. When strong westerly winds prevail the policy has been followed of giving the balloon a very large free lift, the percentage of returns has in consequence been very good. In sixteen cases, which are indicated in the remarks, the meteorograph was sent up attached to an apparatus intended to obtain a sample of the atmosphere from the highest point reached; on such occasions the exposure was a little different from that of the normal case. The chief difference lay in the fact that the distance of the instrument below the balloon was only a few metres instead of forty, but the vertical velocity of the balloon was comparatively large and examination of the records does not indicate that the effects of solar radiation on the instrument were greater than usual.

The ventilation of the Dines meteorograph is effected solely by the natural draught produced by its vertical velocity. The vertical velocity of the rising balloon near the start is indicated approximately in Table 548, being based on a formula derived from a limited number of observations. It is probable that even when the balloon is known to have burst, this velocity was not always maintained up to the highest point of the sounding. After the balloon had burst the velocity of fall is much higher, ranging from about 15 metres per second at 20 Kl. down to 5 near the ground. The ventilation on the descent is more adequate than on the ascent, especially in the stratosphere.

As regards temperature, unless the contrary is stated the mean of the records on the ascent and descent in the troposphere was employed in computing the published figures. In general the difference between the two records did not exceed 5°A., with a mean of about half that amount. Whenever direct evidence is available it is almost always found that in the troposphere the descending record is the colder of the two. An analysis of a large number of British soundings has led to the conclusion that as far as the troposphere is concerned this effect is mainly due to a temperature lag of the thermograph member, and that the mean of the two records gives in general a close approximation to the true air temperature.* In the stratosphere the rule has been followed of using the mean for the lower part, but if the two records begin to diverge steadily with increasing height, or if in the upper part they differ consistently by more than 2 or 3°A., then the descent only is employed from thence upwards. Occasionally in exceptional circumstances it is deemed best to vary these rules, in which cases the fact is stated in the remarks.

In the case of high soundings made during the day-time a pronounced rise of temperature is sometimes observed over about a kiloleo at the extreme top. There is good evidence that this is a fictitious effect due to solar radiation and that the ascent is a great deal more affected by it than the descent. The rise of temperature in such cases is therefore usually ignored. All occasions on which such selection has been made are specifically mentioned in the remarks. An account of this phenomenon is to be found in *Memoirs of the Royal Meteorological Society*, Vol. 2, No. 18. by L. H. G. Dines.

In most cases the meteorograph was fitted with a hair hygrograph. Only the record of relative humidity on the ascent in each case has been published, except when specific mention to the contrary is made in the remarks. The record of the descent appears to be the less reliable for two reasons, first that the previous exposure of the hair to extreme cold and dryness makes it more sluggish in response to changes in the relative humidity, second that the higher velocity at which the meteorograph falls increases the lag in its response reckoned in terms of height. The hygrometer readily shows changes in the relative humidity in the lower part of the troposphere, but the absolute value of its readings may be subject to uncertain error, especially at temperatures below freezing point. No difference has been made in this or previous volumes, in the interpretation of the records as between temperatures above and below the freezing point. For purposes of reference it may however be stated that Depegrams supplied to the International Commission for the exploration of the Upper Air were, up to the year 1929, drawn on the assumption that the published figures of relative humidity at temperatures below 273°A. referred to ice; since 1930 it has been presumed that they refer to water in all cases. Below a temperature of 250°A. it seems doubtful if in the ordinary way the record has any meaning, and the figures for the higher parts of the atmosphere have not therefore been published.

In order to ensure as far as possible that the hygrograph works under standard conditions, it is normally exposed to a saturated atmosphere for ten minutes about an hour before the sounding is made.

The method of calibrating the hygrograph has remained the same as in former years. A full account of the process will be found in the Introduction to the Aerological Section of the Year Books for 1934 and preceding years.

In working up the records the hair has been assumed to have a uniform absolute coefficient of thermal expansion of  $34 \times 10^{-6}$  per degree A. Since the frame of the hygrograph is made of nickel silver having a coefficient of  $18 \times 10^{-6}$  the relative expansion of hair to frame is assumed to be  $16 \times 10^{-6}$  per degree A.

^{*}See also: - Memoirs of the Indian Meteorological Department. Vol. XXIV. Part V, by J. H. Field.

No allowance has been made in computing the published figures for the fact that the results of the calibration are not necessarily valid at low temperatures below the freezing point.

It has been noticed on many occasions that on passing through a cloud the hygrograph hairs expand more than they do when immersed in water or in an artificial saturated atmosphere. This phenomenon is not yet fully understood, but it has been proved that it is not due to errors in calibration or setting of the instrument; accordingly in this volume its occurrence is indicated by publishing a value of the relative humidity in excess of 100%. The values are determined by extrapolation of the calibration upwards through 100.

Data of well marked inversions and regions of zero lapse rate in the troposphere are included in the remarks on the soundings. They are set out in a uniform manner on the principle that corresponding values of geopotential, temperature and relative humidity are given for the salient points in each special case, the sequence being always from lesser geopotentials to greater.

The figures given in the table of lapse rates do not in every case agree with the temperatures appearing in the table of temperature-geopotentials. The reason for this is that both were determined independently from the original data, which can sometimes profitably be read to the nearest half degree, but are rounded off to whole degrees for publication.

The lapse rates given between ground level and 0.5 Kl. are determined from the reading in the thermometer screen at the station and that of the meteorograph at 0.5 Kl. A source of error arises here in that the two standards are independent and are not exposed in the same manner. A small difference is capable of making an appreciable error in the lapse rate, and it is possible that lapse rates apparently greater than 10°A. per Kl. in this layer are sometimes due to this cause.

Whenever possible the meteorograph was briefly calibrated again at one temperature after return, before the record plate had been disturbed, in order to discover whether any shift of zero had taken place since the previous calibration. This provides some check on the behaviour of the instrument, but disturbance is almost inevitable considering the rough treatment experienced in the shock of the fall and after.

All new meteorographs, and all old ones used again after repair, were seasoned in a vacuum chamber before use by being subjected to several slow reductions of pressure. This process has been found greatly to reduce the chance of a systematic difference occurring between the results of a fast and slow calibration. More detail is given in the Introduction to the tables for 1923, and within the limits of accuracy at present attainable in the measurement of upper air pressures, the results of the fast reduction of pressure in the calibration test may be taken as applying to the slow reduction in the actual sounding.

The lag, or difference in pressure reading as between a falling and a rising pressure, is of the order 3 or 4 millibars on the average in the middle region of a high sounding, falling off to lesser values on either side. If a correction be applied to the recorded temperature-pressures to allow for this error, it results, for an average sounding in the troposphere, in an increase in the difference between the temperatures recorded at any pressure on the ascent and descent. The effect is to make the recorded temperatures on the descent too high by about half a degree at a level of 6 or 7 kiloleos, with a tendency for the error to fall off above and below. When the mean of the two records is employed the resultant error is halved and becomes negligible.

In Table 548 occur the entries "Type of Tropopause" and " $L_c$ =Geopotential at Tropopause." These are defined as follows:—Type I. The stratosphere commences with an inversion, and  $L_c$  is the geopotential at the first point of zero temperature gradient. Type II. The stratosphere begins with an abrupt transition to a temperature gradient below 2°A. per kiloleo without inversion, and  $L_c$  is the geopotential of the abrupt transition. Type III. There is no abrupt change of temperature gradient, and the base of the stratosphere is taken at the point where the mean fall of temperature for the kiloleo next above is 2°A. or less, provided that it does not exceed 2°A. for any subsequent kiloleo. In the remarks on the soundings the pressure distribution is classified according to the types defined in "Aids to Forecasting."†

Some statistical tables follow. The table of mean temperatures consists of smoothed monthly means, based on soundings of which about 70% were made from Sealand, 20% from Kew and 10% from Benson. They may be taken as referring to the middle of England. The table of mean pressures is computed from that of mean temperatures and 24 hour means of barometric pressure at mean sea level for the middle of England. The table of temperature corrections allows an estimate to be made of the mean temperature at any height in kilometres; it is based on seasonal mean values, the period Dec.-Feb. being called winter and so on. The table of pressure corrections is based on annual means and is applicable to mean values throughout the year. The correlation data are based on 206 soundings, of which about 80% were made from Sealand and 20% from Kew. The table of monthly means of the five correlated elements has been obtained by smoothing the crude monthly means. Correlation coefficients and standard deviations are based both on departures from the crude means of all the data and also on departures from the smoothed monthly means.

549. 1935.

No. of REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

Sounding cpsh. Clouds Cunb. 8/10 from W'N. at about 0.4 Kl. A deep depression centred over the Baltic is filling up, while an anticyclone is situated west of Ireland. Type I.

- Clouds Stcu. 1/10 from N at about 0.6 Kl. Ci.1/10. Isothermal (2·13-2·95 Kl., 780-700 mb., 262°A., 49-59%). A ridge of high pressure extends over England and Scandinavia, while pressure is low over Greenland and to the west of Norway. Type Ia or IXb.
- . Clouds Frst. 7/10 from WSW at about 0.7 Kl., Ast. 3/10. Owing to non insertion of wedge the record failed below 11½ Kl. The temperatures in the troposphere were estimated from a sounding at Duxford at 13h. G.M.T. The balloon did_not burst and floated for many hours. A depression is centred north-1008. A depression is centred northvest of Scotland, and a ridge of high pressure extends from west of Spain across France and Central Europe. Type II or V.
- Clouds Stcu. 7/10 from W. at about 0.7 Kl., Cicu. and Cist. from NW. moving at 11 rph. Inversion on descent (1.66-1.73 Kl., 817-810 mb., 265.6-270.0°A.). Change of lapse rate at (9.09 Kl., 283 mb., 217°A.). Small depressions lie between the region south of Greenland and Norway, whilst pressure is high west of Spain. Type IV. 1009.
- Clouds Stcu. 3/10 from W'N. at about 0.7 Kl. Small inversion at (5.23 Kl., 503 mb., 243°A., 66%). Change of lapse rate at (9.09-9.32 Kl., 280-270 mb., 214.7-214.3°A.). A complex area of low pressure extends from Greenland to Scandinavia, while an anticyclone is centred west of Spain. Type IV.
- or r. Clouds Frnb. 5/10 and Nbst. 5/10 from W'N. at about 0.25 Kl. Record failed above 8 Kl., probably due to ice on the plate. Pressure distribution:—similar to No. 1011. Type II or Va. 1013.
- or. Clouds Frnb. 5/10 and Nbst. from W. at about 0.4 Ml. Owing to improper insertion of wedge the record and the anticyclone further east. Type II or Va.

  3 Kl. can be estimated from sounding No. 1015. Pressure distribution:—similar to No. 1011, but with the anticyclone further east. Type II or Va. Clouds Frnb. 5/10 and Nbst. from W. at about 0.4 Kl. Owing to improper insertion of wedge the record failed below 3 Kl. The temperatures below
- r. Clouds Frnb. 6/10 and Nbst. 4/10 from SW'W. at about 0.4 Kl. Owing to ice on the plate the upper part of the temperature record is very fragmentary and failed entirely below the top. The temperatures have in some cases been interpolated. Isothermal (1.71-2.00 Kl., 809-780 mb., 276°A., 106-91%). Pressure distribution:—Similar to No. 1014. Type II or Va. 1015. or r.
- 1017. cd r. Clouds Frnb. 5/10 and Nbst. 4/10 from W'S. at about 0.6 Kl. Pressure distribution:—Similar to No. 1015, but the anticyclone is over Spain. Type II.
- Clouds Frnb. 4/10 from W'S. at about 0.6 Kl., Ast. 5/10 from W'S. Mean of both records used for temperature except for the lowest Kl. where the ascent 1018. с. only was employed. Inversion on descent (0.73 - 1.07 Kl., 915 - 875 mb., 278.5 - 280.0°A.). Pressure distribution:—Similar to No. 1017. Type II.

^{*} Meteorograph attached to air sampling apparatus, see introduction.

No. of

REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

Sounding. Clouds Stcu. 5/10 from W'S. at about 0.7 Kl., Ast. 3/10 from W'S. Inversion (0.73-1.12 Kl., 914-870 mb., 279.5-280.5°A., 90-83%). Pressure distribution:—Similar to No. 1017. Type II. 1019.

- Clouds Frnb. and Nbst. 10/10 from WSW. at about 0.25 Kl. Owing to ice on the plate the record failed above 8½ Kl. The record of relative humidity was taken from the descent only. A depression centred west of Norway is deepening and moving SE., while the anticyclone has receded slightly. Type II or I. TO22. OF.
- bc/r_o. Clouds Stcu. and Frcu. 3/10 from W'S. at about 0.6 Kl., Acu. 1/10 from W'S., moving at 24 r.p.h. The stratosphere commences with a small inversion, but the positive lapse rate starts again above it and continues up to 15.5 Kl. Change of lapse rate at (10.34 Kl., 229 mb., 222°A.). Pressure distribution:— I023. Similar to No. 1022. Type I.
- Clouds St. 3/10 from W'N. at about 0.9 Kl., Acu. and Ast. 4/10 from NW'W. moving at 24 r.p.h., Ci, trace. Isothermal (2.17-2.62 Kl., 771-727 mb., 1024. 266°A., 98-57%). The depression referred to in No. 1022 is now centred over the Baltic while a depression over Iceland is deepening. Type IV.
- Clouds Cunb. and Stcu. 5/10 from W'N. at about 0.6 Kl. Ast. 1/10. The balloon did not burst and floated at the top and a rise of temperature of 19°A. at the top was ignored. Change of lapse rate at (2.08-2.91 Kl., 748-670 mb., 262.7-261.5°A., 104-52%). A depression is centred west of Norway and secondaries are centred south of Ireland and east of Denmark. Type XII. 1025. *bc.
- Clouds Cu. and Cunb. 4/10 from W. at about 0.9 Kl. Isothermal (4.01-4.20 Kl., 606-590 mb., 252°A., 58-56%). Pressure is high over the Bay of Biscay, while shallow depressions are centred over Iceland and east of Greenland. Type Va or XII. 1026. *bc.
- Clouds Frcu. 5/10 from S. Balloon leaked, top of record not used. Inversion (1·21-1·66 Kl., 870-821 mb., 272-274°A., 84-48%). A depression is centred west of Ireland and extends over the British Isles, while pressure is high over Russia. Type VIIb. 1028. *bc.
- Clouds Stcu. 5/10 from W'N. at about 0.7 Kl., Ast and Acu. 1/10 from W. moving at 21 r.p.h. Inversion (1.32-1.61 Kl., 870-838 mb., 273.4-274°A., 93-55%). An anticyclone is centred south of Ireland, while a depression is centred over Finland. Type I. 1030. bc.
  - * Meteorograph attached to air sampling apparatus, see introduction.

L.=Geopotential Level above M.S.L. in kiloleos (Kl.)

REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

No. of Sounding.

- 1031. *bcz_o. Clouds Frcu. 2/10 from NW'N. at about 0·7 Kl., Acu. 1/10 from NW'W. moving at 10 r.p.h. Inversion (0·83-1·16 Kl., 930-892 mb., 275·6-279·5°A., 84-43%). A large anticyclone extends from west of Ireland to Central Europe, while a depression is centred over Northern Russia. Type VIIIb.
- 1032. *c/pr_o. Clouds Stcu. 6/10 from W'S., Acu. and Ast. 3/10 from W'N. moving at 18 r.p.h. Ci. trace from NW. moving at 11 r.p.h. A rise of temperature of about 18°A. at the extreme top was ignored. A deep depression is centred over Eastern Scotland and filling up. Type XV.
- ro33. *bc. Clouds Stcu. and Cu. 5/10 from W'N. at about 0.6 Kl. Owing to non insertion of wedge the record was missing below 8 Kl. The temperatures below 8 Kl. were determined from a Duxford flight for the calculation of pressure heights. A rise of temperature at the extreme top was ignored. An anticyclone covers the British Isles, while pressure is low over Russia and south of Greenland. Type I.
- 1034. *b. Clouds Ci. 2/10 from SE. moving at 3 r.p.h. Rise of temperature at the extreme top of about 9°A. which was ignored. Inversion (1·10-1·37 Kl., 892-862 mb., 279·7-281·3°A.). An anticyclone lies between Scotland and Iceland, while a depression west of Spain is filling up. Type VIIIa.
- 1035. *oz. Clouds Frst. 7/10 and Stcu. 3/10 from E. A rise of temperature at the extreme top was ignored. An anticyclone is situated to the north of Scotland while a shallow depression covers France and Spain. Type VIII.
- 1036. c/pr_o. Clouds Cu. and Cunb. 9/10 from SW'W. at about 1.35 Kl. A depression centred off South West Ireland extends over the British Isles. Type IVa.
- 1037. c. Clouds Stcu. 4/10 at about 0.9 Kl. Acu. and high Stcu. 4/10. A rise of temperature at the extreme top was ignored. A depression is situated west of Ireland, while smaller ones are centred over England and Denmark. Type XIII or XIV.
- 1038. bc. Clouds Stcu. 4/10 from SW'W. at about 1.2 Kl., Acu. 2/10 from SW'W. moving at 13 r.p.h. Mean employed for temperature except at 0.5 Kl. where the ascent only was used; a sudden rise of 2°A. at the extreme top was ignored. A depression centred over the Hebrides extends over the British Isles, while pressure is high over the Mediterranean. Type III or XV.
- 1039. c. Clouds Cu., Stcu. and Frst. 9/10 from SSE. at about 0.6 Kl., Acu. trace from S'W. moving at 11 r.p.h. Small inversion at (9.67 Kl., 267 mb., 223°A).

  A depression centred over the south-west of Ireland has secondaries over Northern Spain and Holland. Type VII.
  - * Meteorograph attached to air sampling apparatus, see introduction.

... (mb.)

1041. or. Clouds Nb. 10/10 from SW. The mean of both records was employed for the relative humidity. A rise of 4°A. at the extreme top was ignored. A depression is centred between Scotland and Iceland with other low centres over Southern Scandinavia and Eastern Europe. Type III.

- 1042. crr. Clouds Frnb. 5/10 from SSW. at about 0.5 Kl., Ast. 5/10. Owing to ice on the plate the record was interrupted in many places, in consequence the descent was mainly employed for the temperature data. Pressure distribution:—Similar to No. 1041. Type III.
- bc/pr. Clouds Cu. and Stcu. 6/10 from SW. Acu. and Ast. 1/10 from SSW., moving at 18 r.p.h., Ci. trace from SSW. moving at 13 r.p.h. A rise of about 5°A at the extreme top was ignored. A region of low pressure lies to the north west of Scotland with an anticyclone over Europe. Type V.
- bcy. Clouds Cu. and Stcu. 3/10 from S'W. at about 0.7 Kl. Acu. 4/10, Ci. trace from SW. moving at 18 r.p.h. The apparently excessive læpse rate near the ground is partly due to the temperature at 0.5 Kl. being derived from the mean of both records which differed by 3°A. Change of lapse rate at (2.35 Kl., 750 mb., 268°A., 76%). Pressure distribution:—Similar to No. 1044. Type V.
- 1046. bc. Clouds Cu. and Stcu. 1/10 from S'W. at about 0.9 Kl. Acu. 1/10, Ci. trace from SW. moving at 12 r.p.h. Temperature at 0.5 Kl. taken from ascent only; a rise of 6°A. at the extreme top was ignored. Inversion on ascent (1.29-1.36 Kl., 857-849 mb., 275-276.3°A., 77-64%). A depression is centred west of Ireland with a second centre over Norway. Type IVa or VII.
- 1047. bc. Clouds Cu. and Stcu. 3/10 from WSW. at about 0.7 Kl. Ci. trace from SSW. moving at 7 r.p.h. A rise of 15°A. at the extreme top was ignored. Pressure distribution:—Similar to No. 1046; the depression is slowly filling up. Type III or XV.
- 1048. c. Clouds Stcu. and Frst. 6/10 from SSW. at about 0.8 Kl., Ast. 3/10, Ci. trace from W'S. moving at 15 r.p.h. Inversion (2.76-3.03 Kl., 715-690 mb., 268.2-269°A., 99-60%). A depression lies out in the Atlantic and another off the coast of Norway. Type VII.
- 1049. crrm. Clouds Frnb. 4/10 from S. at about 0.2 Kl., Ast. 6/10. A depression centred west of Ireland is moving eastwards, while a shallow depression is centred over the Baltic. Type IVa.
- 1050. c. Clouds Cu. and Stcu. 7/10 from S'W. at about 112 Kl., Acu 1/10 from SW. moving at 23 r.p.h. Inversion (1.95-2.11 Kl., 803-787 mb., 281-283°A., 100-53%). Change of lapse rate at (12.45 Kl., 184 mb., 212°A). An anticyclone extends over Northern Europe and Southern Scandinavia, while a depression is centred west of Ireland. Type VI.

REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

1051. *Cloudless. A ridge of high pressure extends from The Azores to Scandinavia, while depressions are centred south of Greenland and over the Bay of Biscay. Type VIII.

Clouds Stcu. 9/10 from SW. Sounding curtailed by automatic release. Inversion (1.26-1.50 Kl., 876-850 mb., 283-284°A.), change of lapse rate at (1.81 Kl., 819 mb., 283.4°A.). A shallow depression is centred over Iceland, while pressure is high over Europe, Southern England and The Continent. Clouds Stcu. 9/10 from SW. 1054. Type II.

Type II.

1055. bc. Clouds Cu. 1/10, Acu. 1/10, Ci. 4/10 from NW'W. moving at 8 r.p.h. Unusually high sounding. Small lapse rate (1.63-2.21 Kl., 845-787 mb., 281-2-280-3°A.). An anticyclone is centred over Southern England and France. Type XI.

1056. *b. Clouds Frcu. 2/10 from SE. A rise of temperature of 15°A, at the extreme top was ignored. Inversion (1.35-1.59 Kl., 873-848 mb., 284-285°A.). An anticyclone is situated over Northern France and the North Sea with a depression to the south of Iceland. Type XIa.

1057. *c. Clouds St. 4/10 from WSW. at about 0.6 Kl., Stcu. 3/10 Acu. and Ast. 2/10 from SW'W. moving at 9 r.p.h. Descending record used for temperature except below 2 Kl., ascending record used at 0.5 Kl. A rise of 11° A. at the extreme top was ignored. Change of lapse rate at (3.80 Kl., 630 mb., 266°A.), and at (4.13 Kl., 604 mb., 266°A.). A secondary to a depression over Iceland is centred off the east coast of England. Type Va.

1058. c. Clouds Cu. and Stcu. 7/10 from W'S. at about 0.8 Kl., Acu. 2/10 from SW'W. moving at 22 r.p.h. Two meteorographs sent up side by side, the data was obtained from the mean of both. A rise of temperature of 7°A. at the extreme top was ignored. Isothermal (2.86-3.45 Kl., 715-663 mb., 272°A. 91-55°%). A deep depression lies over Iceland with an extension over Scandinavia and a region of high pressure to the west of the Bay of Biscay. Type I.

1059. c. Clouds Cu. and Stcu. 6/10 from W'S. at about 0.9 Kl., Acu. and Ast. 3/10 from W'N. moving at 17 r.p.h. Inversion (2.47-2.70 Kl., 746-724 mb., 270·5-271°A.). Isothermal (3.41-3.69 Kl., 660-637 mb., 266°5°A.). A depression with associated secondaries extends from Greenland across Scandinavia, while an anticyclone is centred west of Spain. Type II.

with an extension over Scandinavia. Type VII.

1061. bc. Clouds Cu. trace from NW. at about 1·1 Kl., Ci. 6/10 from W'S. moving at 16 r.p.h. Change of lapse rate at (4·27 Kl., 596 mb., 270°A., 60%). A depression is centred east of Iceland, while pressure is high over Eastern Europe and the Atlantic. Type Ia.

1062. c. Clouds Acu. 5/10 from NW., Ci. and Cicu. 2/10 from W., all clouds moving very slowly. The sounding was curtailed by an automatic release. Isothermal (5·23-5-41 Kl., 526-514 mb., 260·5°A.). A depression is centred south west of Iceland, while a ridge of high pressure extends from an anticyclone over the Atlantic to the British Isles. Type XI.

1065. ofir. Clouds Nbst. 10/10 from WNW. at about 0·4 Kl. Mean of both records used for the temperature except near the ground where a bias was made towards the ascending one. A depression is centred over South West England. Type XV.

^{*} Meteorograph attached to air sampling apparatus—see introduction.

P.=Pressure in millibars. L.=Geopotential Level above M.S.L. in kiloleos (Kl.) RH.=Relative Humidity as percentage.

REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

No. of Sounding.

1066. *cm. Clouds Cu. and Stcu. 8/10 from SSW., Acu. 1/10 from SW. moving at 10 r.p.h. A rise of temperature of about 30°A. at the extreme top was ignored. Isothermal (1.94-2.46 Kl., 794-742 mb., 270°A.). A ridge of high pressure extends over the British Isles while pressure is low over Iceland, Scandinavia and the Continent. Type Va.

- 1068. c. Clouds Frst. and Stcu. 3/10 from W. at about 0.9 Kl., Acu. 5/10 from W'N moving at 10 r.p.h. Inversion on descent (0.87-1.12 Kl., 920-893 mb., 279:4-282°A.), inversion on ascent (1.05-1.27 Kl., 900-876 mb., 277:4-281°A., 102-54%), inversion (1.90-2.14 Kl., 810-786 mb., 277:5-278°A., 46-36%). An anticyclone lies over the Bay of Biscay with a region of low pressure between Iceland and Norway. Type II.
- 1069. bcv. Clouds Stcu. 5/10 from W'S at about 0.9 Kl., Acu. 1/10 from NW. moving at 10 r.p.h. Inversion on descent (4·12-4·32 Kl., 609-594 mb., 265-267°A.).

  Inversion on ascent (4·41-4·75 Kl., 587-561 mb., 264-265·4°A., 90-49%). Pressure is high over France while a complex low pressure system extends from Iceland to Scandinavia. Type II.
- n. Clouds Stcu. 4/10 from W'S. at about 1.2 Kl. Position of tropopause indefinite. Isothermal on descent (1.19-1.45 Kl., 885-855 mb., 278.5°A.). Inversion on ascent (1.35-1.45 Kl., 867-855 mb., 275-278.5°A., 94-65%), small inversion (9.56-9.77 Kl., 279-270 mb., 223-223.5°A.). Pressure distribution:—Similar to No. 1068; the anticyclone over France has extended westwards. Type II. 1070. bcm
- Clouds Frst. 1/10 from WSW, at about 0.7 Kl., Ast. and Acu. 8/10 from W'N. moving at 16 r.p.h. Inversion (1.56-1.77 Kl., 844-822 mb., 275-276°A., 56-51%). Pressure distribution:—Similar to No. 1069, but a secondary is crossing the north of Scotland, moving east. Type II. IO7I. C.
- Clouds Stcu. 1/10 at about 0.7 Kl., Ast. 6/10, Ci. 1/10 from W. moving at 12 r.p.h. Isothermal (1.33-2.12 Kl., 868-786 mb., 279°A., 60-33%), isothermal (4.35-4.67 Kl., 590-564 mb., 260.6°A., 62-49%). Pressure is high over France and the Channel, low in the region between Iceland and Scandinavia 1072. C.
- Clouds St. 9/10 from WSW. at about 1 Kl., Acu. trace from W. moving at 17 r.p.h. Inversion on descent (1.60-1.77 Kl., 837-820 mb., 275.6-276.9°A.), inversion (2.01-2.40 Kl., 795-756 mb., 275-275.5°A., 90-82%), change of lapse rate (5.91 Kl., 475 mb., 252°A., 68%), change of lapse rate (6.31 Kl., 450 mb., 251.4°A.), 69%), change of lapse rate (11.23 Kl., 214 mb., 214°A.). Pressure distribution:—Similar to No. 1071. Type I or II. 1073. c.
- c. Clouds Cu. and Stcu. 5/10 from W'N at about 0.6 Kl., Cist. 4/10. Inversion (1.74-2.14 Kl., 821-780 mb., 268.7-271.0°A., 89-44%). Pressure is high over the Channel and Bay of Biscay, low over Scandinavia and south west of Iceland. Type I.
- Clouds Stcu. 3/10 from WSW. at about 0.7 Kl., Acu. 6/10 from W. moving at 18 r.p.h. Change of lapse rate (1.21 Kl., 881 mb., 275°A., 81%), change 1075. cm of lapse rate (13.44 Kl., 150 mb., 209°A.). Pressure distribution:—Similar to No. 1073. Type IV.
- Clouds Frst. and Stcu. 7/10 at 0.9 Kl., Ast. 2/10. Inversion on descent (1.05-1.33 Kl., 896-866 mb., 277.9-279°A.), inversion on ascent (1.57-1.67 Kl., 840-829 mb., 276.2-277°A., 90-75%), change of lapse rate (2.79 Kl., 719 mb., 272.5°A., 44%), inversion (6.31-6.64 Kl., 450-430 mb., 251-253.1°A., 95-89%), change of lapse rate (13.01 Kl., 162 mb., 209°A.), change of lapse rate (14.43 Kl., 128 mb., 206°A.). A deep depression to the south of Iceland is moving east. Type IV.

1935.

REMARKS ON THE SOUNDINGS AND THE PREVAILING WEATHER CONDITIONS, 1935.

Clouds Stcu. 4/10 from SW'W. at about 0.9 Kl., Pressure distribution:—similar to No. 1075, the depression being now centred near the Orkneys. Type I.

No. of

1079.

- Sounding.

  1077. bc. Clouds Stcu. 2/10 from S'W. at about 0.7 Kl., Acu. 5/10 from W'N moving at 18 r.p.h. Pressure distribution:—Similar to No. 1075. Type IV or V.
- 1077. BC. Clouds Steel. 2/10 Holli S W. at about 67 Ki., Act. 5/10 Holli W I. Moving at 10 119.
- 1080. b. Clouds Frst. trace. Changes of lapse rate at (4.71 Kl., 543 mb., 250°A., 28%); (5.11 Kl., 514 mb., 249.5°A., 27%); (8.47 Kl., 313 mb., 224°A.), and (12.34 Kl., 170 mb., 219°A.). A large trough of low pressure extends from Spitzbergen to Iceland and thence to the SSW., with high pressure over Russia. Type Va.
- 1081. *c. Clouds Stcu. 8/10 from W. at about 1·1 Kl. The balloon floated at the highest point and a rise of about 30°A. at the extreme top was ignored. A complex low pressure area covers the British Isles and extends north-west from them. Type XIII.
- ozr_o. Clouds St. 10/10. A rise of temperature at the extreme top was ignored. Inversion on ascent (0·33-0·73 Kl., 959-912 mb., 280-281°A.). A depression is centred off South West Ireland with a secondary over Northern France, high pressure over Russia. Type VIIa.
- 1083. bcm. Clouds Frcu. trace from SW'S. at about 0.9 Kl., Ci. 7/10 from N'W. moving at 12 r.p.h. Inversion (1.53-2-22 Kl., 842-769 mb., 270.4-271°A.).

  A deep depression is centred over Iceland, while a ridge of high pressure extends over Southern England and France. Type II.
- 1084. bm. Clouds Acu. 1/10. A complex low pressure system extends over Europe and Scandinavia. Pressure is high west of Spain. Type XII.
  - * Meteorograph attached to air sampling apparatus—see introduction.
